# 1. INTRODUCTION

## 1.1. Problem Description

### **The Changing Landscape of Shopping and Tourism**

In a constantly evolving world, the shopping and tourism industry is experiencing rapid changes. New trends and technologies are reshaping the way businesses engage with consumers and deliver experiences.

# 1. INTRODUCTION Cont.

## 1.2. Project Subject

Cross-platform application is built with the Flutter framework and seamlessly integrates with Firebase and NodeJS as its backend powerhouse.

The project's goal is to provide a simpler way of operating, flawlessly integrating store management, engaging users, and providing real-time exploration of potential offers.

## 2. LITERATURE

- The primary goal of our project is to enhance the efficiency of businesses, particularly those in the retail sector.
- Another goal is to make a user-friendly mobile application that simplifies the entire shopping experience for both the shop owners and consumers.
- Also, the project is not just about making shopping easier now but also preparing for future improvements.

# 3. MATERIAL and METHOD

## 3.1. Material

- Flutter:

**1**

### Fast Development

Flutter enables rapid development with a hot reload feature, allowing for quick updates and modifications during the development process.

**2**

### Beautiful UI

With its rich set of customizable widgets, Flutter allows the creation of stunning user interfaces that enhance the overall user experience.

**3**

### Single Codebase

Developers can write a single codebase for both iOS and Android platforms, streamlining the development and maintenance process.

**4**

### Community Support

Flutter has a vibrant and active developer community, ensuring access to a wealth of resources, libraries, and tools for app development.

## 3. MATERIAL and METHOD Cont.

- Firebase:

### **1 Real-Time Database**

Firebase offers a real-time NoSQL database, ensuring instant storage and retrieval of user-generated content.

### **2 User Authentication**

Integrate Firebase's user authentication services for secure and hassle-free user registration and login processes.

### **3 Hosting & Storage**

Leverage Firebase's hosting and storage for deploying the application and managing media and static files.

## 3. MATERIAL and METHOD Cont.

- NodeJS:

**1**

### Scalability

NodeJS, known for its event-driven architecture, enables the backend to handle a large number of concurrent connections and scale seamlessly.

**2**

### Rich Ecosystem

NodeJS has a vast ecosystem of libraries and modules, facilitating the development of sophisticated backend features and functionality.

# 3. MATERIAL and METHOD Cont.

- Data Storage:
- MYSQL:

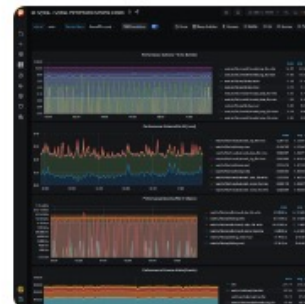

## MYSQL Database

Our backend relies on the powerful MYSQL database for secure and efficient data storage. MYSQL provides reliability, scalability, and extensive support for handling complex data operations.

## Optimized Performance

With MYSQL, we ensure fast and responsive data retrieval and manipulation, enabling smooth user experiences and efficient backend operations.

## Data Security

MYSQL offers robust security features and encryption mechanisms, ensuring the confidentiality and integrity of your valuable data.

## Prisma ORM

Prisma is used as an Object-Relational Mapping (ORM) tool to provide a type-safe and scalable database access layer. It simplifies database operations and enhances the efficiency of data handling.

## 3. MATERIAL and METHOD Cont.

### • 3.2. Method

1

#### **Figma Design**

Create a visually appealing and user-friendly design using Figma, a powerful design tool.

2

#### **Create NodeJS APIs**

Develop robust and scalable backend APIs using NodeJS, which powers efficient data processing and management.

3

#### **Build Flutter App**

Utilize the Flutter framework to build a cross-platform mobile application with a native-like user interface and smooth performance.

### 3. MATERIAL and METHOD Cont.

- **Authentication**

- The authentication process in the app was constructed by Firebase. The procedure starts on the app's first page where the users encounter a login interface featuring a text-field for their phone number, a button to initiate login, and an option to sign up.
- With Firebase OTP, users enter their phone number to initiate login. Firebase Authentication then sends a One-Time Password (OTP) via SMS, adding an extra layer of security. Users input the received code on the OTP entry page, and upon verification, they gain access to the application.

# 3. MATERIAL and METHOD Cont.

## • Shops Page

1

### Shop Management Overview

Provides an overview of all the shops managed from the business owner's account

2

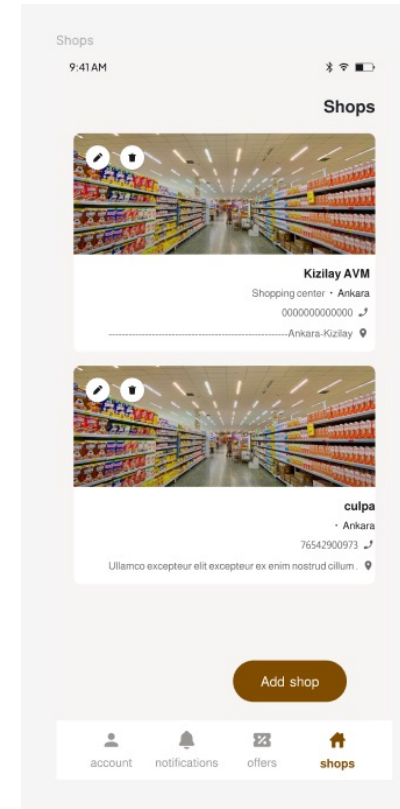

### Add New Shop

The business owner can easily add a new shop by pressing the "Add New Shop" button.

3

### Edit and Delete Shops

For existing shops, the business owner can initiate edits to update information or make corrections.

# 3. MATERIAL and METHOD Cont.

## • Offers Page

1

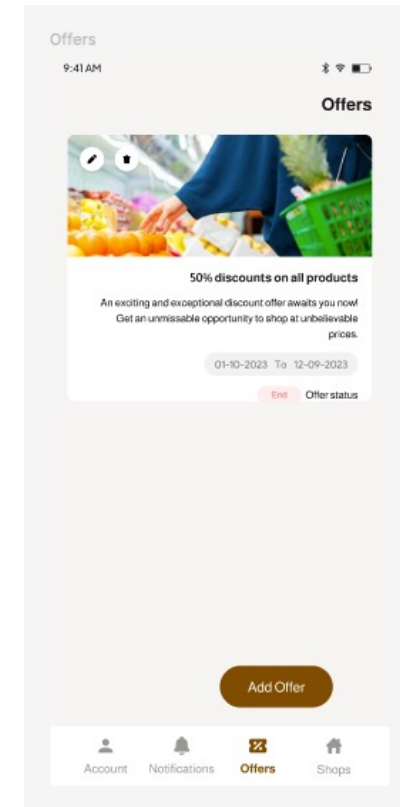

### Create and Manage Offers

Control center for creating and managing promotions and offers.

2

### Offer Details

Provides specific offer details, including its description and relevant dates.

# 3. MATERIAL and METHOD Cont.

## • Notifications Page

1

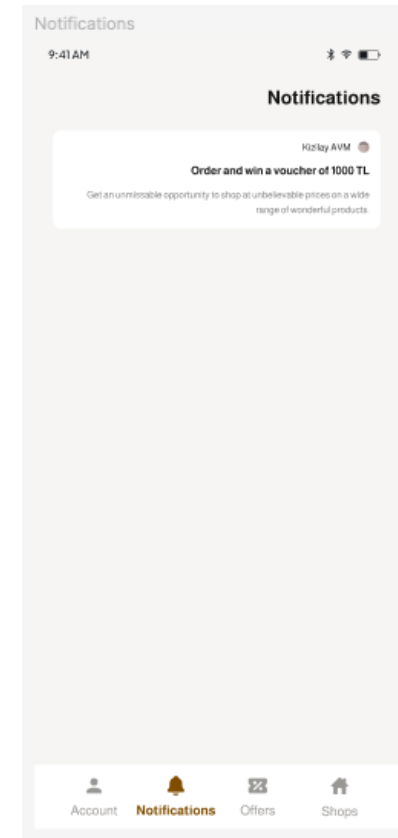

### Notifications Overview

Keeps a history of notifications sent by the business owner to customers.

2

### Sending Notifications

Compose and send notifications.

# 3. MATERIAL and METHOD Cont.

## • Account Page

1

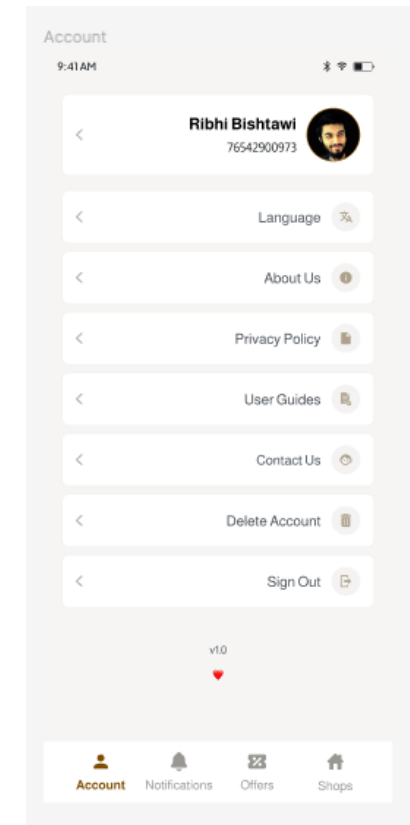

### Account Management

Enables the business owner to manage many settings, such as personal details.

2

### Application Settings

Customize application settings, such as language preferences.

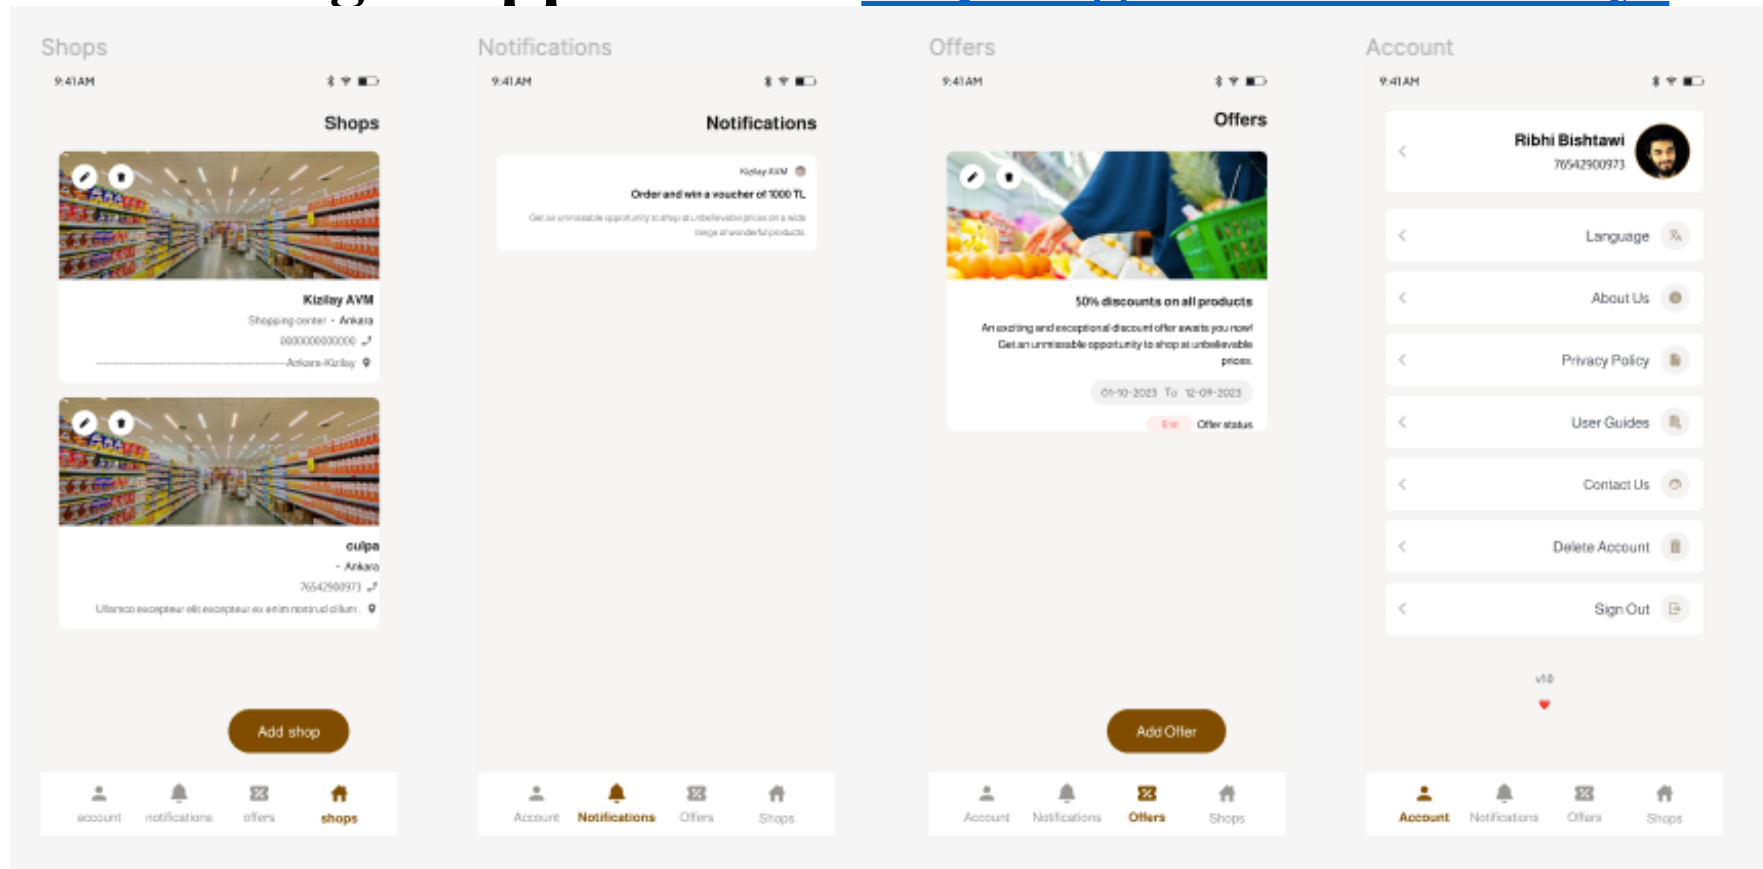

# 4. APPLICATION

- **Manager Application:** <https://github.com/ribhy->

# 5. CONCLUSION

Cross-Platform

Efficient Development

Scalable Backend

Enhanced User Reach

Shopping Experience

Future Improvements
